<b>Collaboration &amp; Communication Core Skill #DAHS-NCCCAC12</b>		
<b>Expected Outcome: The nurse will function effectively within nursing role and interprofessional teams</b>		
Demonstrates consistent performance in precepted experience of professional collaboration and communication		
<b>Cultural Sensitivity/Patient-Centered Care Core Skill #DAHS-NCCCSPCC12</b>		
<b>Expected Outcome: The nurse will provide care that recognizes and respects patient preferences, values, and needs. Nurses shall use cross cultural knowledge and culturally sensitive skills in implementing culturally congruent nursing care</b>		
Patient-Centered Care – Completed in CPPN General Nursing Orientation		
Population-Specific Care – Completed in CPPN General Nursing Orientation		
Advance Directives for Healthcare & Physician Order for Life-Sustaining Treatment Online Module #DAHS-NGNADPOLST16		
Age Specific Care Online Module #DAHS-NGNASC11- <i>Passing score of 85% on test</i>		
Pediatric Learning Solutions Online Module: Age Specific Care: Newborn through Adult and Child Abuse and Neglect		
<b>Infection Prevention Core Skill #DAHS-NCCIP12</b>		
<b>Expected Outcome: The nurse will utilize current evidence and standards of care in prevention, recognition, and treatment of patient infection.</b>		
Demonstrates consistent performance in precepted experience of using infection prevention standards of care.		
<b>Informatics Core Skill #DAHS-NCCIFO12</b>		
<b>Expected Outcome: The nurse will effectively utilize information and technology to communicate, improve safety, and support decision making.</b>		
EMR Training		
Demonstrates basic technology skills (load paper, un-jam printers, print)		
Documentation Standards according to unit specific charting		
Documentation in Nurses' Progress Notes		
Use of Professional Exchange Report		
Navigates in Windows environment effectively		
Uses computer technology safely (log-in/log-out, protects passwords)

<b>Medication Safety Core Skill #DAHS-NCCMS12</b>		
Expected Outcome: Nurse will administer patient medications in a consistent safe manner		
Completed Pediatric Learning Solutions <b>Online Module</b> : Basic Medication Calculation		
Demonstrates consistent performance in precepted experience of safe medication practices.		
<b>Patient Rescue Core Skill #DAHS-NCCPR12</b>		
Expected Outcome: The nurse will effectively manage patient emergencies.		
Demonstrates consistent performance in precepted experience of appropriate management of patient emergencies.		
<b>Patient Safety Core Skill #DAHS-NCCPS12</b>		
Expected Outcome: The nurse will provide safe nursing care		
Demonstrates consistent performance in precepted experience of provision of patient safety.		
<b>Professional Practice Core Skill #DAHS-NCCPP12</b>		
Expected Outcome: The nurse will provide professional nursing care consistent with organization and department philosophy, values, mission, and goals		
Demonstrates consistent performance in precepted experience of professional nursing care

<b>Adult Respiratory Assessment DAHS-NSCAMBARA</b>		
Completion of online module "Assessment: Respirations" DAHS-NGN353-ECS		
Note if patient has an oxygen delivery system and what type of system it is.		
Make general observation of patient's overall mentation and appearance.		
Observe for rate, depth, pattern, symmetry, and effort of respirations. Observe for use of accessory muscles.		
Observe for color and pallor of skin and mucous membranes.		
Observe for color, quantity, and consistency of secretions.		
Observe the position of the trachea.		
Auscultate in an orderly manner, starting with the anterior chest and moving to the posterior chest, all lung fields. Describe lung sounds appropriately.		
Palpate the neck, chest, and shoulders to assess for the presence of subcutaneous air.		
Monitor and document oxygen saturations and End Tidal CO2 levels when appropriate.		
Describe/demonstrate method for contacting a higher level of care.		
Have available in the room, or know how to locate and use, necessary emergency respiratory equipment.		
Document all pertinent information in the appropriate locations.		

<b>Anorectal Swab Checklist for Gonorrhea/Chlamydia DAHS-NSCASC GC</b>

<b>Anorectal Swab Checklist for Gonorrhea/Chlamydia DAHS-NSCASC GC continued</b>		
Explain the procedure to the patient, including its purpose, potential discomfort, and the role of the chaperone. Offer the patient the opportunity to ask questions or voice concerns.		
Obtain verbal consent from the patient before proceeding with the procedure.		
Provide the patient with a gown and ask them to undress from the waist down. Provide privacy.		
Ensure the availability of a chaperone and introduce them to the patient.		
Perform hand hygiene according to the facility's standard protocol.		
Don gloves and other PPE as required.		
Have patient lie on their side, with their knees bent, maintaining modesty and comfort.		
Offer the patient a pillow for support if needed. Encourage the patient to relax.		
Gently separate the patient's buttocks to expose the anal area. Insert a dry swab 3-5 centimeters (1-2 inches) into the rectum		
Rotate the swab gently for 5-10 seconds, clockwise while pressing against the rectal mucosa.		
If the swab is grossly contaminated with feces, discard the swab, and repeat the collection.		
After removing the swab, carefully place into a labeled collection container.		
Assist the patient in assuming a comfortable position.		
Dispose of used materials and waste appropriately in biohazard containers.		
Perform hand hygiene		
Document the procedure, including the patient's tolerance, any adverse reactions, and the presence of a chaperone.		
Ensure the collected specimen is promptly labeled in the patient's presence and sent to the appropriate laboratory for testing.		
Provide the patient with post procedure instructions, including information about potential side effects and when to expect results.

<b>Cystourethroscopy, assisting with DAHS-NSCAMBCTAW</b>		
<b>References:</b>		
1. <a href="#">Clinical Policy 11028 High Level Disinfection of Endoscopic Instruments</a>		
2. <a href="#">Clinical Policy 4019, Universal Protocol</a>		
3. <a href="#">UC Davis Health Policy 2111, Disinfection in Patient Care Areas</a>		
4. <a href="#">Clinical Policy 11027, Cleaning Endoscopes Prior to Cold Sterilization/High Level Disinfection</a>		
Utilizes equipment user manual and follows operating instructions		
Disinfects cystoscope equipment per <a href="#">Clinical Policy 11028 High Level Disinfection of Endoscopic Instruments</a> . Documents date/time in disinfection log.		
Documents any new symptoms, allergies, etc. and the presence, if any, of artificial joints or mitral valve prolapse		
If using Cidex OPA for scope processing, screen patient for history of bladder cancer as this is a significant contraindication		
Document with use of cystoscopy dot phrase		
UROLOGY – Obtain clean catch urine sample if patient is symptomatic for urinary tract infection (UTI). GYN - Obtains clean catch urine specimen with and without symptoms of UTI or straight cath per provider		
As applicable, perform POC Urine Dipstick and advise provider of results		
UROLOGY - Sets up IV pole with 500ml sterile normal saline. GYN - Sets up IV pole with 1000ml sterile water		
Verifies equipment, light source, and paper (as applicable) are operating correctly.		
Prepares patient for procedure.		
Performs procedural pause per <a href="#">Clinical Policy 4019, Universal Protocol</a>		
Assists provider during cystourethroscopy.		
Provides patient instructions. Mild dysuria and transient hematuria should disappear within the first 48 hours after the procedure. The patient usually should be able to void normally after a routine cystoscopic examination, although some burning may be experienced.		
Provides post procedure medications as ordered by provider		
Cleans and reprocesses cystoscope equipment per <a href="#">Clinical Policy 11027, Cleaning Endoscopes Prior to Cold Sterilization/High Level Disinfection</a> and <a href="#">Clinical Policy 11028 High Level Disinfection of Endoscopic Instruments</a> .

<b>Cystourethroscopy, assisting with DAHS-NSCAMBCTAW Continued</b>		
Documents date/time and disinfection log (if department uses Cidex).		
Documents patient MRN in disinfection log (if department uses Cidex).		
Disinfects room and exam table per <a href="#">UC Davis Health Policy 2111, Disinfection in Patient Care Areas</a>		

<b>Doppler Ultrasound for Blood Pressure Assessment in the LVAD Patient #DAHS-NSCDUABPPDVAD</b>		
<b>References:</b>		
<ol style="list-style-type: none"> <li><a href="#">UC Davis Health Policy 5002: Durable Ventricular Assist Device: Nursing Management</a> (Section V Paragraph B)</li> <li><a href="#">Elsevier Clinical Skills: Doppler Ultrasound for Assessment of Blood Pressure and Peripheral Pulses</a></li> <li>VAD Aware Training DAHS-NGNVADA15</li> </ol>		
If possible, ensures that the patient is seated or supine for at least 5 minutes		
Positions the appropriately sized blood pressure cuff above the elbow with the bladder midline over the brachial artery		
Using a handheld doppler, locates the patient's brachial arterial Doppler sound. Tilts the probe at a 45-degree angle along the length of the vessel. Avoids putting excess pressure on the probe		
Maintains the position of the probe over the artery and inflates the blood pressure cuff until the arterial Doppler sound is no longer audible		
Deflates the cuff slowly and notes on the sphygmomanometer when the first Doppler sound is heard		
The number on the sphygmomanometer associated with the first Doppler sound is the patient's mean arterial pressure (MAP)		
Removes cuff, wipes gel from patient's arm. Discards supplies, removes PPE, performs hand hygiene, and documents findings in the EMR		
Cleans the face of the Doppler probe with a soft tissue. Follows manufacturer's recommendations for disinfecting the probe after each use		

<b>Holter Monitor DAHS-NSCAMBHMA</b>		
<b>References:</b>

Holter Monitor, continued DAHS-NSCAMBHMA	Date	Verifier Initials
Set up monitor: Pre-program monitor for 24 hours, 48 hours, 7 days or 21 days as ordered with patient name, medical record number, DOB via recorder entry or computer program with HL7 interface using order number. Place new battery in monitor and attach wires. Attach electrodes to wires.		
Review patient financial responsibility form with patient; have patient sign.		
Review diary and instructions with patient. Explain importance of filling out diary		
Inform patient they can perform daily activities except for tub bathing, showering, or swimming		
Instruct patient to avoid swinging or bumping the monitor. The battery should not be removed under any circumstances.		
Prep Skin: <ul style="list-style-type: none"> <li>a. Shave areas as needed</li> <li>b. Cleanse the area with a prep pad</li> <li>c. Gently abrade the skin with the abrasive pad</li> </ul>		
Attach the wire to the electrode before putting on the patient's chest. Place the electrodes in the anatomical locations, pressing on the outside of the electrode to make sure it is attached to the chest, not pushing the center of the electrode.		
Locate proper anatomical landmarks: White lead- right mid-clavicle of the sternum Red lead- left anterior axillary line 6th rib (v5) Black lead- left mid-clavicle of the sternum Brown lead-1 inch right of the sternum 4th rib space (v5) Blue lead-center of manubrium Orange lead- left mid-clavicular line 6th rib (v4) Green lead-lower right margin over bone		
Tape the electrode cable wires on the electrodes with a stress loop allowing the wires to hang free		
Attach the monitor to the belt or shoulder/neck pouch		
Document Holter monitor placement in the patient's EMR.		
After the recording is completed, the patient returns the monitor with the diary.

<b>Liquid Nitrogen (LN2) Safety #DAHS-NSCLNS</b>		
<b>References:</b>		
1. <a href="#">UC Davis Health Policy 1624: Safe Management of Cryogenic Liquids</a>		
2. <a href="#">UC Davis Health Policy 1624, Attachment 1: Liquid Nitrogen Safety - Manual Filling of Dewars</a>		
Inspects all PPE and cryogenic equipment prior to use		
Wears safety glasses and face shield		
Wears waterproof, loose-fitting, cryogenic gloves		
Wears cuffless pants and shoes made of nonabsorbent material		
Wears long-sleeved shirt and lab coat or cryogenic apron. If lab coat or cryogenic apron not worn, shirt is worn outside of the pants		
Verifies that Dewar is constructed to withstand cryogenic temperatures		
Verifies that Dewar is dry (water expands upon contact with LN2 and can crack the Dewar)		
Uses open Dewar flasks only in well-ventilated areas		
Prevents and stands clear of any LN2 boil off, vapors or splashes		
Uses tongs or tweezers to immerse or withdraw objects from LN2		
To prevent pressure-causing condensation obstruction, uses a cork with a groove cut into the side or a loose fitting plug		
Uses safe lifting techniques when handling loads		
<b>MDI with Spacer #DAHS-NSCMDIS14</b>		
<b>References:</b>		
1. <a href="#">UC Davis Health Policy 17020: Inhaled Pulmonary Drug Administration (Excluding Pentamidine/Ribavirin/Surfactant)</a>		
Demonstrate knowledge of how the Pharmacy is notified for MDI.		
Verbalize how to administer MDI with Spacer correctly.		
Prior to and immediately after use of inhaled bronchodilators, antibiotics and steroids, the patient's pulse, respiratory rate and breath sounds are assessed. Also, any cough or mucous production may be noted.		
Verbalize when to notify Respiratory Therapy or Pharmacy.		
Demonstrate documentation of teaching.

Intramuscular injection skill verified (see "Injections: Intramuscular, Subcutaneous, and Z-Track Methods)		
Ensures Methotrexate is stored in a closed container at room temperature away from heat, moisture and direct light		
Use nitrile gloves when administering Methotrexate		
Disposes of gloves, empty syringe and vial per <a href="#">Clinical Policy 10001: Hazardous Drugs (HD) (Chemo): Safe Handling/Preparation/Administration/Disposal of Waste/Spill Procedures</a>		
<b>Mini-Cognitive Screening Exam (Ambulatory) DAHS-NSCMCSEAMB</b>		
<b>References:</b> 1. <a href="#">Mini-Cog® Quick Screening for Early Dementia Detection</a> 2. <a href="#">Step-by-Step Mini-Cog® Instructions</a>		
Verifies provider order prior to starting assessment. Uses 2 patient identifiers to identify patient.		
Take the person being tested to a comfortable room that does not have distractions a. Have them sit at a table and provide a pencil with an eraser b. They also need a piece of paper for drawing the clock, and you can decide whether the paper is blank or if you're providing the circle (the link above provides the circle)		
Look at the person being tested and say "I'm going to say three words. I want you to repeat them back to me, and you will need to remember them again at the end of the test." a. Then clearly speak three unrelated words, which are provided by the test. b. An example is "river, nation, finger."		
Have the words spoken back by the test-taker as soon as you've said all three		
Have the test-taker draw a clock with the time "10 past 11." a. You can provide the circle b. Allow three minutes to complete this task c. Do not help but be friendly and encouraging		
Ask the person "What were the three words I spoke at the beginning of the test?" Write down the answers.

Demonstrate use of 12-lead ECG available in area.		
Place patient supine and provide for patient privacy.		
Enter patient data prior to obtaining 12-lead ECG.		
Cleanse the skin areas to be used, if needed.		
Correctly place leads, ensure that there is no tension on the cable.		
Obtain 12-lead reading, trouble-shooting artifact.		
Recognize proper 12-lead tracings.		
Disconnect equipment and clean as necessary.		
Document all pertinent data, and notify appropriate staff of results

<b>Oxygen Therapy and Oxygen Delivery Principles #DAHS-NSCOTODP15</b>		
<b>References:</b> UC Davis Health Policy <a href="#">6018</a> : Oxygen Administration		
Adjust the O <sub>2</sub> to the flow rate as directed by the equipment recommendations to deliver the prescribed amount of O <sub>2</sub> . The float ball in the flowmeter should be positioned so the flow rate line is in the middle of the ball.		
Check to see that O <sub>2</sub> is flowing through the cannula or mask.		
For nonrebreather masks, the reservoir bag must be prefilled with O <sub>2</sub> before it is applied to the patient. When using an O <sub>2</sub> mask with a reservoir bag, adjust the flow rate so that the bag does not collapse, even with a deep inspiration.		
If humidification (i.e., a nebulizer with corrugated tubing) is being used, periodically check the tubing and drain the tubing of excess water as needed.		
Monitor all O <sub>2</sub> delivery devices to ensure that they are functioning correctly and delivering the desired concentrations of O <sub>2</sub> .		
<b>Peak Flow Meter DAHS-NSCAMPFM</b>		
<b>References:</b> 1. <a href="#">Elsevier Clinical Skills: Peak Expiratory Flow Measurement - CE</a>		
Completion of online module "Peak Expiratory Flow Measurement" DAHS-NEN166-ECS		
Performs per <a href="#">Elsevier Clinical Skills: Peak Expiratory Flow Measurement - CE</a>		
If MA/LVN is performing this procedure, RN to determine the patient's level of dyspnea pre-procedure. Post-procedure, RN to assess for pain, dyspnea, bronchospasm, dizziness, and for the need to use a rescue inhaler.

<b>Post-Void Residual with a Catheter DAHS-NSCPVRWAC</b>		
<b>References:</b>		
<ol style="list-style-type: none"> <li><a href="#">UC Davis Health Policy 9010 Urethral Catheter Insertion, Maintenance and Removal</a></li> <li><a href="#">UC Davis Health Policy 18004 Specimen Labeling for Laboratory Processing</a></li> <li><a href="#">Departmental Policy: Post-Void Residual with a Catheter</a></li> <li><a href="#">Elsevier Clinical Skill: Bladder Scan</a></li> </ol>		
Identify patient with two patient identifiers prior to the start of the procedure.		
Explain procedure to patient and ensure patient agrees with procedure.		
The LVN will verify that there is an order in the Electronic Medical Record (EPIC) for bladder scan for residual.		
Have patient lay flat on bed. Place patient in a reclining or supine position.		
Clean the probe with isopropyl alcohol or other organization-approved disinfectant and allow to air dry.		
Perform hand hygiene and don gloves. Don additional PPE based on the patient's need for isolation precautions or the risk of exposure to bodily fluids.		
Place 5-10 ml of ultrasound gel on the patient's midline lower abdominal/suprapubic area.		
Using the bladder scanner, check and record the amount of urine in the patient's bladder.		
Measure and record the amount the patient voided.		
For post-void residual volume, wait 5-15 minutes after the patient has voided before scanning the bladder and document the time of the scan in the patient's record.		
Obtain post-void residual with ultrasound (Bladder Scan) if the instilled volume is not the same as the voided amount.		
If the patient fails the voiding trial (patient has residual urine in the bladder), the provider will place an order to place a straight/ Foley catheter or provide the patient with CIC (Clean Intermittent Catheterization) teaching.		
The LVN will place a straight/Foley catheter per <a href="#">UC Davis Health Policy 9010, Urinary Catheter Insertion, Maintenance and Removal</a> , if ordered by physician.		
If urine culture is ordered by the provider, obtain urine specimen according to guidelines in the Laboratory Test Directory and label per <a href="#">UC Davis Health Policy 18004 Specimen Labeling for Laboratory Processing</a> .		
Record Keeping: EMR procedure note documentation including voided and post-void residual volumes.

Completion of online module "Seizure Precautions and Management" DAHS-NGNSP-ECS		
Ensure a safe environment if possible		
Ensure emergency equipment is available		
Note time, duration, and type of seizure activity		
Remain aware of patient safety during seizure, including positioning and airway		
Notify appropriate personnel of seizure activity		

<b>Urodynamics, assisting with DAHS-NSCAMBUAW</b>		
<b>References:</b>		
1. <a href="#">UC Davis Health Policy 2111: Disinfection in Patient Care Areas</a>		
Assists patient with use of Uroflowmeter equipment as directed by provider.		
Assists provider during procedure while maintaining compassion and dignity for patient.		
Provides patient instructions. Patient may experience mild discomfort for a few hours after these tests. Increasing fluids for two hours should help. Check with provider if patient can take a warm bath. If not, patient may be able to hold a warm, damp washcloth over the urethral opening. This may relieve discomfort.		
Patient may be given an antibiotic to prevent an infection. Instruct patient to call the office for signs of infection. These signs include pain, chills, or fever.		
Disinfects room and exam table per <a href="#">UC Davis Health Policy 2111: Disinfection in Patient Care Areas</a>		
Disinfects specialized equipment according to manufacturer's guidelines.		
Documents appropriately in EMR.

<b>Visual Acuity DAHS-NSCAMBVA</b>		
Completion of online module "Assessment: Visual Acuity" DAHS-NEN274-ECS		
Stations patient appropriate distance from eye chart or seats patient at appropriate level at Titmus machine and can verbalize understanding of feet markings on chart.		
Documents presence of contact lens, glasses, prosthetic eye, etc. Verbalizes understanding that contact lenses do not need to be removed. Glasses may be on and off with scoring both ways.		
Verbalizes understanding what to do if patient is unable to focus eye(s) due to irritation, sensitivity and/or tearing.		
States normal parameters and fundamental scoring for eye testing. Articulates how appropriate chart is chosen for adults and children (based on age, development level, language, etc.).		
Demonstrates correct procedure for eye testing		
Explains the technique for shielding one eye while testing the other		
Documents the eye test scores correctly.		
Verbalizes understanding of the type of eye problems that should be reported to the provider immediately. Documents problems appropriately and interpreter if used.

<b>Voiding Trial for Adult Urology Patients DAHS-NSCVTFAUP Continued</b>		
Continue to fill bladder slowly until patient feels urge to void or complains of any discomfort., or a maximum of 500 mls normal saline. Stop filling immediately if patient complains of discomfort.		
Remove foley catheter: to remove foley, aspirate all fluid from balloon with 12 ml luer lock syringe and gently remove catheter.		
Have patient void into urinal (men), urine collection hat (female) or Uroflow machine		
Measure amount voided; obtain post void residual with ultrasound (Bladder Scan) if instilled volume does not equal voided amount.		
Patient conditions that require consultation: unexpected findings will be reviewed with the supervising MD/APP including signs of complications from procedure requiring further assessment such as excessive bleeding or prolonged pain.		
If the patient fails voiding trial, the MD/APP will place an order to place a foley catheter		
The LVN will place foley catheter per policy <a href="#">UC Davis Health 9010, Urinary Catheter Insertion, Maintenance and Removal.</a>		
Record keeping: EMR procedure note documentation, individual provider procedure log as required for credentialing.		
<b>Zoll AED Plus (Automated External Defibrillator) DAHS-NSCZAEDP</b>
